

ICS 4U1/3 Term Project Evaluation Policy

One of the 4 overall expectations of this course is software development through a team project. As a member of a team you are making a commitment to your fellow team members to do your part of the project. The expectation is that each team member takes equal responsibility and workload throughout the project.

This will be tracked through the Monday plans and Friday reports culminating in the Final Project Report due June 11, 2014.

Everyone is responsible for their fair share of work in every aspect of the term project. To that end, students will be held accountable through weekly planning and reports based on the Project Division of Tasks and Final Report which will be completed at the end of the project.

Since this documentation will impact on final marks, it is the student's responsibility to ensure that the details in each submission be accurate throughout the project.

If team members are not contributing equally to the project, the final project marks will be adjusted by the teacher to reflect the proper percentage of work done by each member of the team based on the Friday reports and Final Project Report.

It is the responsibility of the team members to bring work concerns to the teacher as soon as possible so that steps can be taken to address a discrepancy in the team workloads.

Everyone is responsible for all aspects of the project -start to finish, regardless of task division for the final exam - 50% of which is on the term project.

It is each team member's responsibility to ensure the following:

- the hours recorded in the team reports are accurate
- each task is completed by the member assigned to it
- proper credit in the form of JavaDoc comments (author) is given for each project code
